

ĐOÀN NHẬT LONG

Full Stack Developer | Phone: 0912 84 92 94

Email: long3515@gmail.com | Github: <https://github.com/DoanNhatLong>

EDUCATION

- Bootcamp Java Web FullStack at CodeGym | GPA: 86/100.
- Toeic : 635 / 990 | CEFR English B2 level certificate - Upper Intermediate
- Danang University of Science and Technology | GPA : 3.26/4.00.

SKILL

- **Back-End:** C#, .NET, Java, NestJS, Spring Boot, Spring Security (JWT), MySql, Redis, CloudDB, WebSocket.
- **Front-End:** ReactJS, Redux, HTML/CSS , Bootstrap, Responsive.
- **Tools:** Docker, Render, Git, Vercel, Git Action (CI/CD), Aiven.

PROFESSIONAL EXPERIENCE

PROJECT: QUIZ MANAGEMENT SYSTEM

March 2026 - May 2026

Description: A comprehensive quiz platform that enables students to practice and take exams while providing teachers with powerful tools to manage question banks, create diverse assessments, and monitor exam rooms in real-time.

Source:

Back-End Source Code https://github.com/DoanNhatLong/project_quiz_backend

Front-End Source Code <https://github.com/DoanNhatLong/project-quiz-frontend>

Production Link <https://project-quiz-frontend.vercel.app>

Note: The system follows a distributed architecture with Frontend, Backend, and Database hosted on separate servers. Due to the "cold start" policy of free hosting services, the Backend may require 3-4 minutes to wake up on the first access.

Technologies:

- **Back-End:** Java (Spring Boot), RESTful APIs, WebSocket.
- **Database & Caching:** MySQL, Redis.
- **Front-End:** ReactJS.
- **DevOps:** Docker, GitHub Actions.

Key Features & Technical Implementation

- **Exam Resilience & Recovery:** Enables users to seamlessly resume exams upon device switching or network interruptions without data loss, ensured by robust session persistence logic.
- **Question Bank Management:** Supports large-scale question banks with high-performance data retrieval via strategic Database Indexing and optimized data transfer using DTOs/Projections.

- **Security & Anti-Spam:** Secured the system using Spring Security (JWT) and implemented Redis-based Rate-limiting to prevent spam attacks on critical API endpoints.
 - **Real-time Exam Monitoring:** Managed live waiting rooms and synchronized proctoring via WebSockets, integrated with Spring Scheduler to fully automate exam lifecycle management (auto-start/auto-end).
 - **Smart Content Generation:** Integrated AI APIs for automated question generation and Cloudinary for high-efficiency media asset management and image storage.
 - **System Logging & AOP:** Leveraged Spring AOP to decouple logging and state snapshot logic from core business services, ensuring clean code and comprehensive system auditing.
-

PROJECT: DOCUMENT OCR SYSTEM

February 2026 –March 2026

Description: Developed a web application for accounting service companies to upload, classify, and process invoices/documents. Implemented Google SSO, role-based access control, document management, and admin reporting features. Integrated OCR APIs to automatically extract data from invoices and provided an interface for reviewing OCR results before importing.

Github: https://github.com/DoanNhatLong/practice_.net/tree/main/projectCs

Technologies:

- **Core:** C#, ASP.NET MVC
- **Front-End:** ReactJS
- **Database:** MySQL (JDBC/Hibernate).

Key Features (Basic):

- Upload and manage PDF, JPG, PNG documents.
- Google SSO authentication.
- OCR integration for automatic data extraction.
- Admin dashboard with user management and access logs.

Responsibilities

- **Database Design:** Designed and implemented the database schema, ensuring data integrity and optimized structures for system requirements.
- **Admin Logic:** Developed core business logic for the Admin dashboard, focusing on data management and administrative control features.

SOFT SKILL

- **Self-Learning & Research:** Proactively mastering new technologies and solving technical challenges independently.
- **Critical Thinking:** Deeply analyzing system requirements from multiple perspectives to ensure optimal, long-term solutions.
- **Team Collaboration:** Effectively coordinating with team members (especially Frontend) to ensure seamless API integration.
